The Big6™ Skills <http://big6.com/pages/about/big6-skills-overview.php>

The Big6 is a process model of how people of all ages solve an information problem. From practice and study, we found that successful information problem-solving encompasses six stages with two sub-stages under each:

1. Task Definition

- 1.1 Define the information problem
- 1.2 Identify information needed

2. Information Seeking Strategies

- 2.1 Determine all possible sources
- 2.2 Select the best sources

3. Location and Access

- 3.1 Locate sources (intellectually and physically)
- 3.2 Find information within sources

4. Use of Information

4.1 Engage (e.g., read, hear, view, touch)

4.2 Extract relevant information

5. Synthesis

5.1 Organize from multiple sources

5.2 Present the information

6. Evaluation

6.1 Judge the product (effectiveness)

6.2 Judge the process (efficiency)

People go through these Big6 stages—consciously or not—when they seek or apply information to solve a problem or make a decision. It's not necessary to complete these stages in a linear order, and a given stage doesn't have to take a lot of time. We have found that in almost all successful problem-solving situations, all stages are addressed
